■ MONDAY 4th FEBRUARY 2019

An Introduction to Paranormal Investigation

We are delighted to introduce **Kieran Woodhouse**, paranormal investigator

A lifelong interest in anything paranormal, from ghosts to Bigfoot to UFOs, has led Kieran down the path of paranormal investigations.

He now spends his spare time investigating haunted locations with a team, and occasionally delving in to the world of UFOs and conspiracy theories.

Kieran believes that these fields aren't completely disconnected and can be drawn together if the dots are connected correctly.

Kieran's presentation is for those looking to start out in paranormal investigating.

He explains how different pieces of equipment are used and talks about his personal experiences using the equipment, as well as any scepticism he has towards investigating.

■ MONDAY 11th FEBRUARY 2019

VIDEO NIGHT: The Smart Prison

This film is a dystopian look at a possible future – the double-edged sword that is everything smart.

A bit of a convenience in speed paid for by lax security, more non-ionizing radiation (think a microwave oven with the door open), yet more baby steps toward total surveillance and an open version of the Panopticon.

Discussion afterwards.

■ MONDAY 18th FEBRUARY 2019

School - No Place For Children: A Wake-Up Call

Following his popular presentation, last year, **David Adelman** continues his investigation into schooling and indoctrination

A dynamic talk about how school holds us all back, revealing the global agenda that lurks behind our draconian schooling methods, and how and why we need to reclaim the power and potential to live a life more of our own making and allow our children to do the same.

Otherwise we are in trouble.

■ MONDAY 25th FEBRUARY 2019

A Perspective on Human Existence Explored through the Medium of Popular Song

Karl Boyle is a Preston musician, who utilises modern technology to integrate popular songs with video and sound effects

We are about to enter the most transformative period in mankind's history with developments in AI, robotics and genetic engineering.

Living in an increasingly unpredictable and complex world, we lead chaotic busy lives, and are continually bombarded with contradictory information.

Issues such as privacy of data, and the negative consequences of social media are concerns to many people.

In the presentation, Karl attempts to raise some questions on what it means to be human in terms of our personal journeys, and our collective tenure of the planet.

Professor Stephen Hawking warned that we have 1000 years at the outside in which to leave the planet, and some reports have given as few as 12 years in which to tackle the climate change problem.

Karl is not seeking to peddle any particular message, but hopes that you will enjoy his evening of thoughts and music.
